

Prompting Techniques

Datta Punjare

1 One-Shot Prompting

- One-shot prompting means giving the model one example of the task, so it can understand the pattern and produce a similar answer.

Input

Hello -> Bonjour
Now translate: GoodBye

Output

Goodbye -> Au revoir

Observation

Only one example is given as a demonstration at the start of the chat. The model observes the given example, understands the pattern, and applies the same pattern to the new input.

2 Few-Shot Prompting

- Few-shot prompting means giving the model multiple examples of a task so that it can understand the pattern and apply it to a new input.

Input

Hello -> Bonjour
Thanks -> Merci
Now translate: GoodBye

Output

GoodBye -> Au revoir

Observation

Provide multiple examples to the model. By observing these examples, the model understands the pattern better and applies it to the new input.

3 Zero-Shot Prompting

- Zero-shot prompting means giving the model a task without providing any examples. It gives only an instruction or question and tells the model the steps to achieve the answer.

Input

If a train travels 60 km in 1.5 hours, what is its speed?

Output

Speed = Distance / Time
60 / 1.5 = 40
Answer: 40 km/h

Observation

Zero-shot prompting does not provide any example to the AI. It directly asks a question to the model. The model answers the question using its pre-trained knowledge.

4 Natural Language Query (Direct Answer)

Input

What's the weather in Nashik?

Output

Right now in Nashik, it is around 28 degrees C with rain.
The weather is breezy, with more showers possible this afternoon.

Observation

The model did not generate the weather details itself. Instead, it took the information from a live weather API connected in the background.

5 Code Generation Request (Function Simulation)

Input

Write a Python function `get_weather(city)`
and show how it would call it for Nashik.

Output

Weather information for Nashik

6 Call the Function for Nashik

Input

Write a Python function `get_weather(nashik)`
and show how it would call it for Nashik.

Output

Getting weather for Nashik
